

[Interview] David Dial VP of Accedian Networks International Sales & Marketing Department

“We are planning to expand from domestic carriers to business customer target, starting with SK Telecom”

Network Performance Assurance Solution Specialist, Accedian Networks marks Korea.

David Dial VP of Accedian Networks International sales & marketing said “SK Telecom the leading carrier of innovation can secure not only network safe assurance but also provide QOS to the customers by phasing in ‘Network Performance Monitoring Solution”.

Accedian is providing a specialized monitoring solution to mobile network and enterprise data center network connection. This enables multi-vendor interoperability and show network status. Network performance monitoring solution can find the problem beforehand.

David VP explained "Can identify problems before expanding into a serious situation with adaptable technology."

Its special features also provide function confirming technology by region. Accedian monitors its performance through Long Term Evolution's (LTE) signal with voice, video, and general data, and etc. It means the QOS experienced by the costumers through each service will be possible to confirm. Dial VP also said "Service assurances experienced by the customers are important to secure and through reliable network performance, service provider can provide variety of high quality services."

Through network performance management, latest user can receive reliable services. By securing Carrier, etc Accedian networks customer's safe network, additional services can also be developed. Dial said ""If performance monitoring networks are stabilizing, with its base we can create various services, to ensure reliable service to add premium customers will be able to cause an internal innovation."

Accedian will expand its domestic carriers and business customers target. Other than carriers there are many companies that need to secure its networks. This is why Accedian highly appreciates the potential of the market. David finalizes "With secured equipment compatibility Accedian solutions are applicable to all networks, securing both stabilize network service and economical cost."
