Accedian Drives NetSecOps Convergence With Secure Network Performance

Network operations and security teams must work together like never before to avoid downtime, guarantee service levels, and mitigate risks to their organizations.

Silos between these teams have existed for many years, and getting everyone working from the same page has always been challenging. Network complexities have caused many organizations to re-evaluate how they manage their network today and look at new models such as "Converged NetSecOps".

Accedian's Skylight platform unifies the network by converging performance and security visibility into a single solution, giving organizations more control and flexibility and reducing downtime.

> " There is a very strong correlation between close NetSecOps collaboration and overall network operations success.

Accedian's Skylight Platform Meets the Convergence Challenge

Accedian is leading the way in bringing performance and security together in a single platform, helping customers lower costs, improve efficiencies and intelligence driven from holistic insight, and speed time to detection to remediate risks faster and reduce downtime. One of the prominent use cases this unified view enables, and that many of our customers rely on, is end-to-end visibility across the hybrid cloud with the ability to quickly identify and categorize incidents as a "performance," "security," or a "joint" problem that needs to be fixed.

The operational efficiency benefits ensure that teams can quickly mitigate performance or security risks without major disruptions to their business. This also allows IT, network, and cybersecurity experts to concentrate on innovation, value creation, and simplification because they know that their organization's continuity and resilience are already in place.
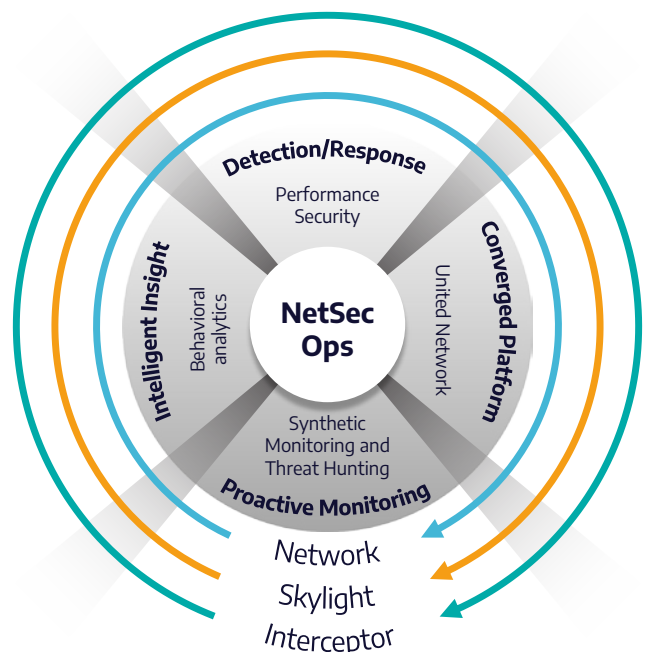

According to Gartner,
the average cost of network downtime to customers is approximately

$5,600

per minute and climbing

Skylight & Skylight Interceptor – A Unified Network Approach

Detection/Response — Performance Security

Converged Platform — United Network

Proactive Monitoring — Synthetic Monitoring and Threat Hunting

Intelligent Insight — Behavioral analytics

NetSec Ops

Network Skylight Interceptor

Benefits of Accedian's Approach to United Performance and Security Visibility

- A single vendor, single tool, and single platform

- Faster time to resolution

- Reduces network complexity

- Convergence and collaboration of skills

- Lower cost of ownership

- Tool consolidation and integrations

- Eliminates blind spots between technologies

- SLA monitoring of B2B services and self-serve end-user portals for service quality and KPI monitoring

Skylight Performance Visibility Ensures You Meet User Experience Goals

Accedian Skylight provides end-to-end visibility and intelligent insights for hybrid cloud solutions with built-in analytics and orchestration capabilities to manage network performance more efficiently. It is the industry's first solution that brings active and passive packet analysis into a single, unified view; this means complete visibility of your critical IT and cloud environment and maximum control in delivering flawless end-user experiences.

- Gain active and passive performance monitoring in one

- Expand your visibility – from the macro view of overall experience across the hybrid cloud down to granular visibility down at the microsecond level

- Proactively test connections to avoid downtime and ensure quality of service and experience

Skylight Interceptor NDR Speeds Cyber Threat Detection and Response

Skylight Interceptor is a Network Detection and Response solution (NDR) that helps organizations proactively identify threats that hide deep within the network and are often missed by other security solutions. Interceptor protects the network by delivering prioritized, context-rich incidents to speed security detection and response.

- Stop the Zero-Day threats your perimeter security is missing

- Simplify and automate threat hunting and forensics

- Expand your Zero Trust Architecture (ZTA)
