

# Driving Sustainability Initiatives with Green VPN

**Monica Aguado**, Solution Engineering, Accedian

**Abeel Choudry**, Systems Architect, Cisco

**Guillaume Ladhuie**, Technical Solutions Specialist, Cisco

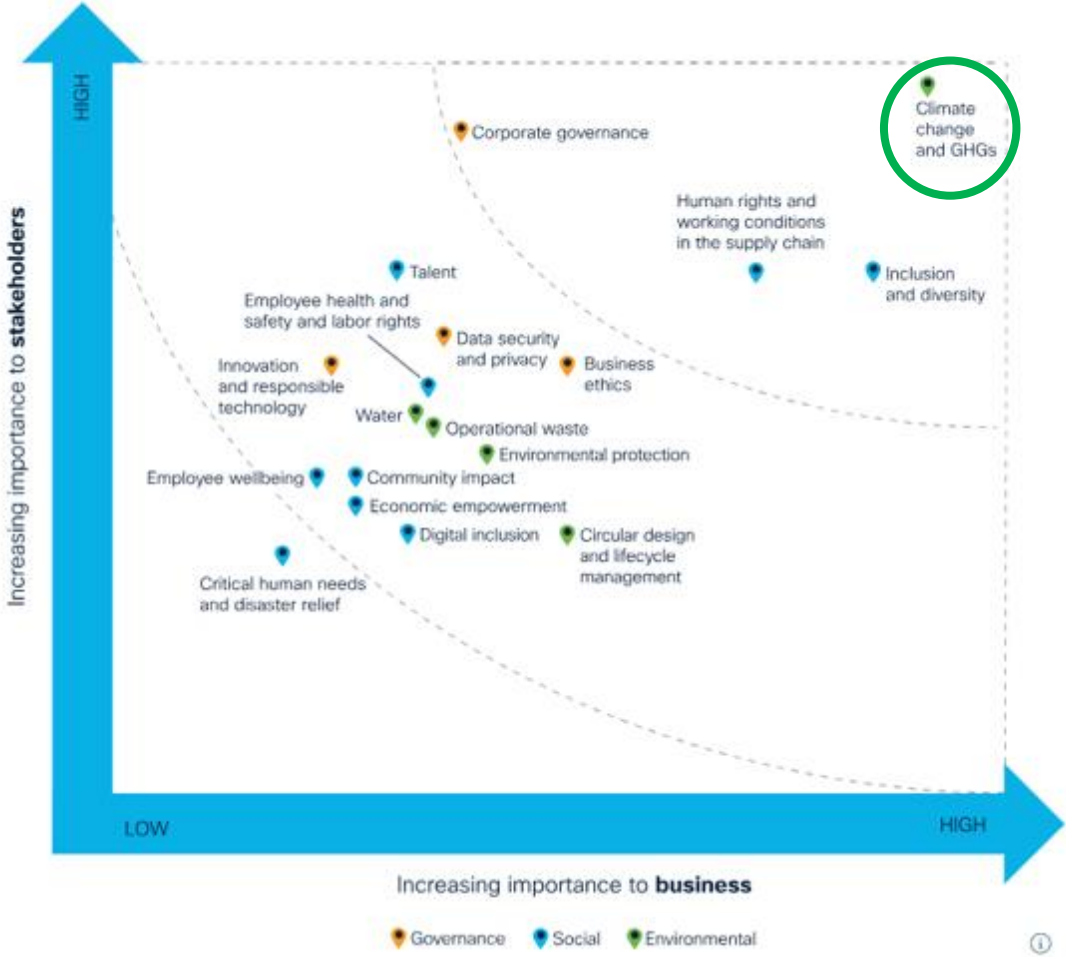

# ESG is Front and Center in Cisco's Business Model

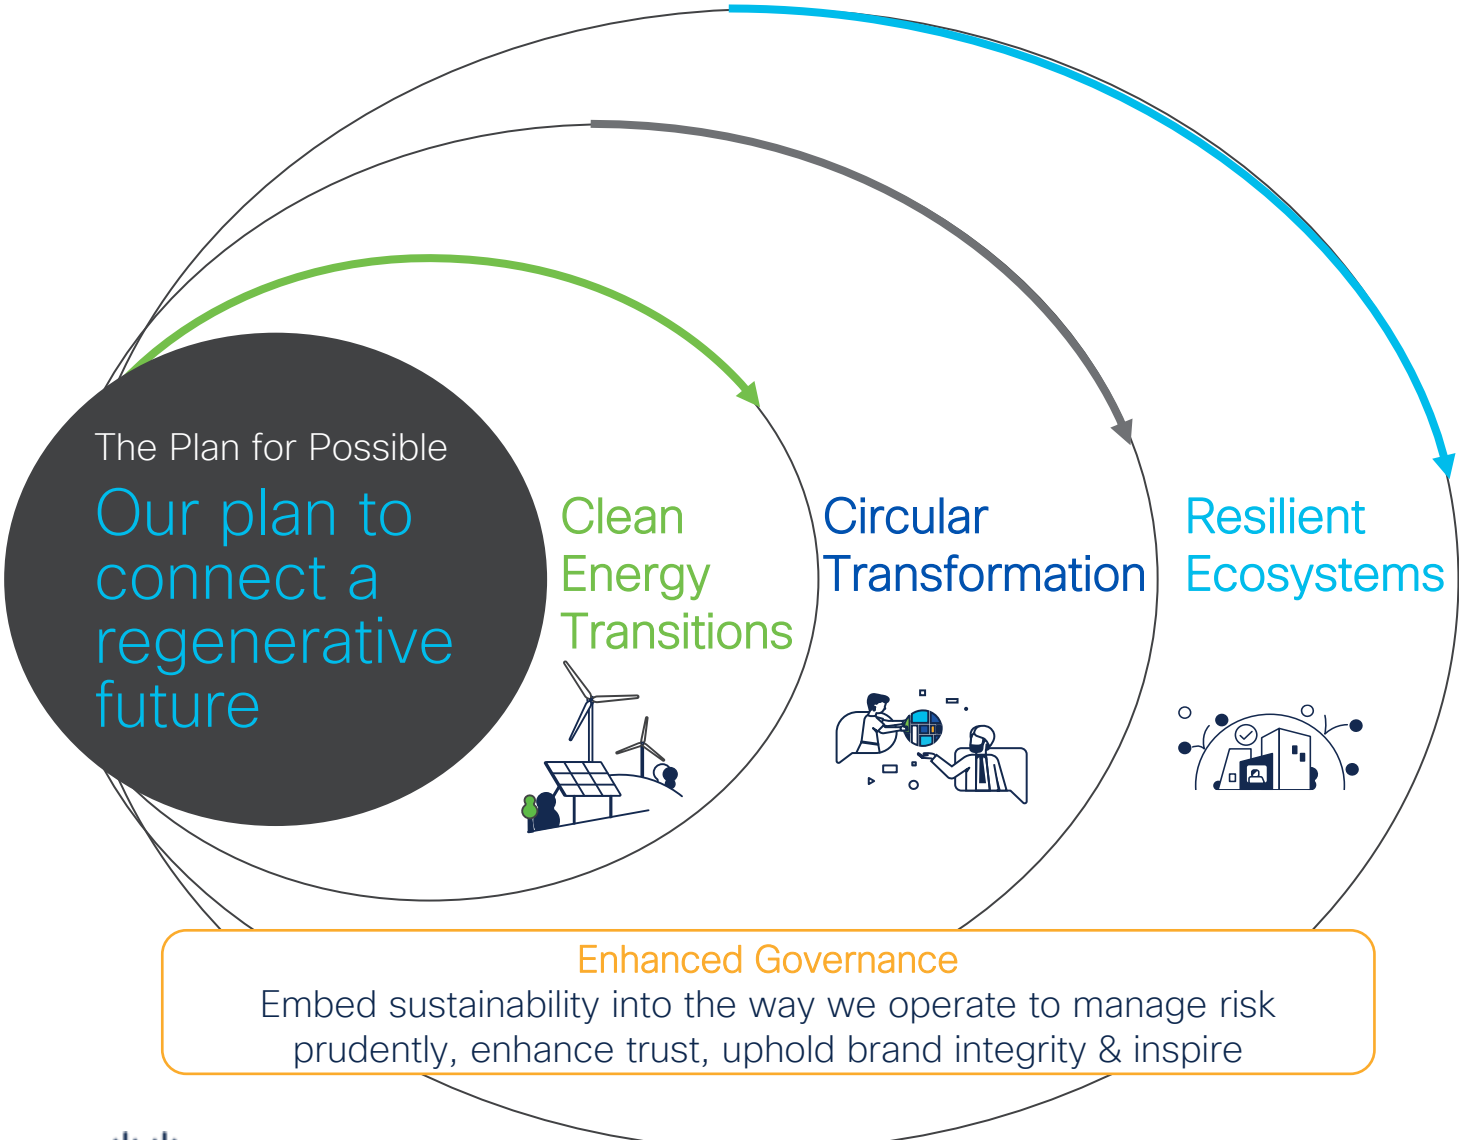

Delivering on important environmental, social, and governance (ESG) goals is not just critical for society, but also for our business.

Chuck Robbins, Cisco Chairman & CEO 2022  
*Cisco Purpose Report*

Cisco's FY 21 ESG Materiality Matrix

# Clear Targets, Including on Energy Reduction

## Clean Energy Transitions

Net zero across our value chain by 2040

Reduce absolute Scope 1 & 2 GH emissions 90% by 2025<sup>1</sup>

Reduce absolute Scope 3 emissions from purchased goods and services, upstream transportation and distribution, and use of sold products 30% by 2030<sup>1</sup>

# The Way Forward for Energy Reduction

## Priority 1: Transition to clean energy

It is possible to accelerate clean energy adoption toward Net Zero.

## How we'll do it:

- Lead in **energy efficiency innovation**
- Connect clean energy and **digitize the grid**
- **Collaborate with our customers, partners, and suppliers** to accelerate the energy transition

## How we've started:

- Developing the **Silicon One chip** to reduce energy consumption while increasing bandwidth
- Pioneering **Universal Power Over Ethernet** to optimize energy use for smart buildings
- Helping our supply chain **set GHG reduction targets**<sup>1</sup>

<sup>1</sup>Cisco has a goal that 80% of our component, manufacturing, and logistics suppliers by spend will have a public, absolute GHG emissions reduction target by FY25. Progress as of FY22: 78%

# Where Can Cisco/Accedian Help Service Providers Make a Difference?

## Customer Challenges

- Achieve sustainability targets
- Demonstrate OPEX savings to stakeholders
- Single pane of glass operational view
- Energy generation diversity across the globe

## Cisco/Accedian Solutions

Accedian Skylight analytics and sensors

Cisco SDN Automation solution

Cisco 8000 hardware based on SiliconOne

'GreenVPN' application

## Outcomes

- Single pane of glass view for sustainability data alongside performance assurance metrics
- Leverage Analytics capabilities to enact quick decisions and take actions based on insights more efficiently

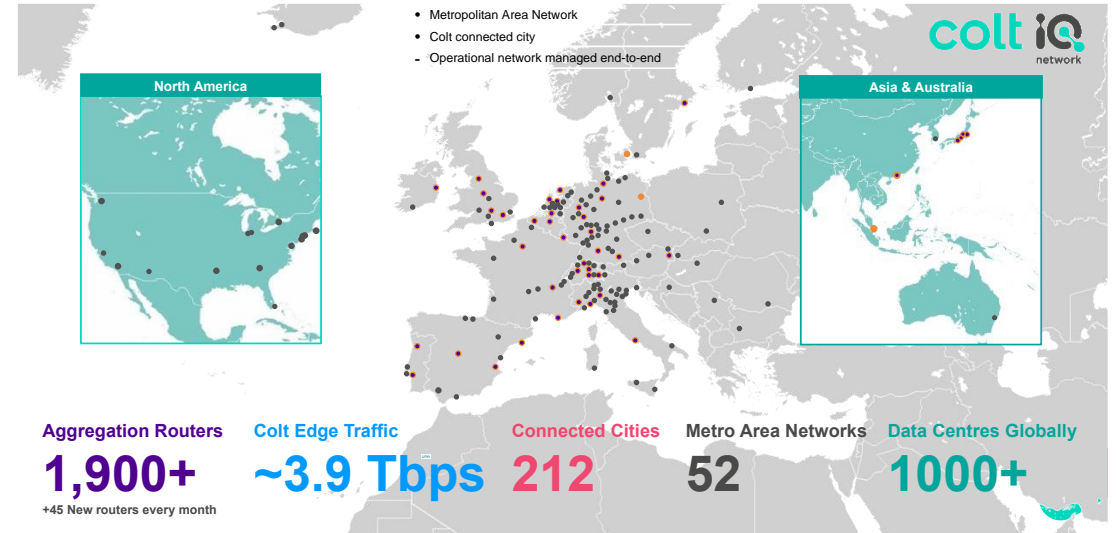

- Full life cycle management of services
- Service optimisation based on metrics such as latency, carbon footprint etc.

- Best in class power efficiency (2.5W/100Gbps)
- Helps achieve Net zero targets for SP's

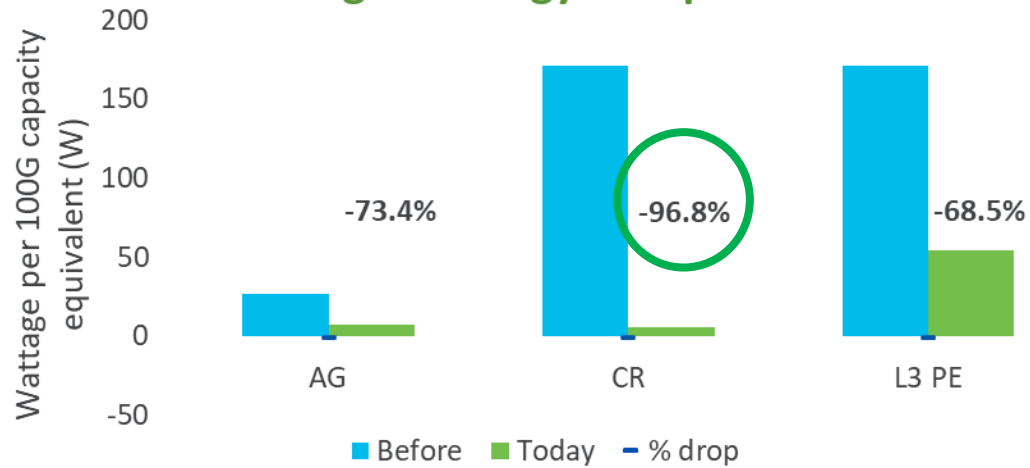

- Common API to collect carbon footprint data for power generation per country
- Calculate power/carbon footprint per service

# Cisco SiliconOne Shows Results

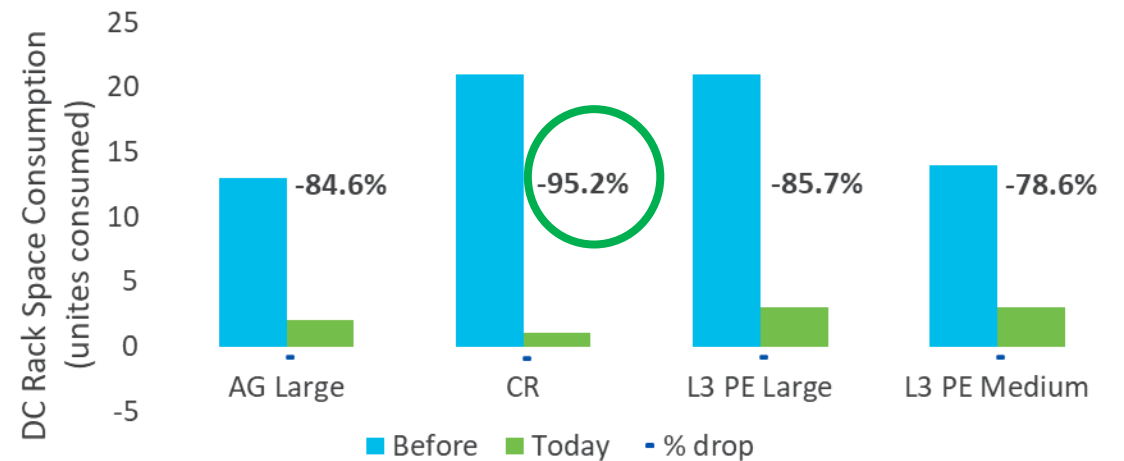

**⚡20GW/hr  
power saving  
across the  
network**

## Reducing its Energy Footprint

# GreenVPN: New Optimization Metrics

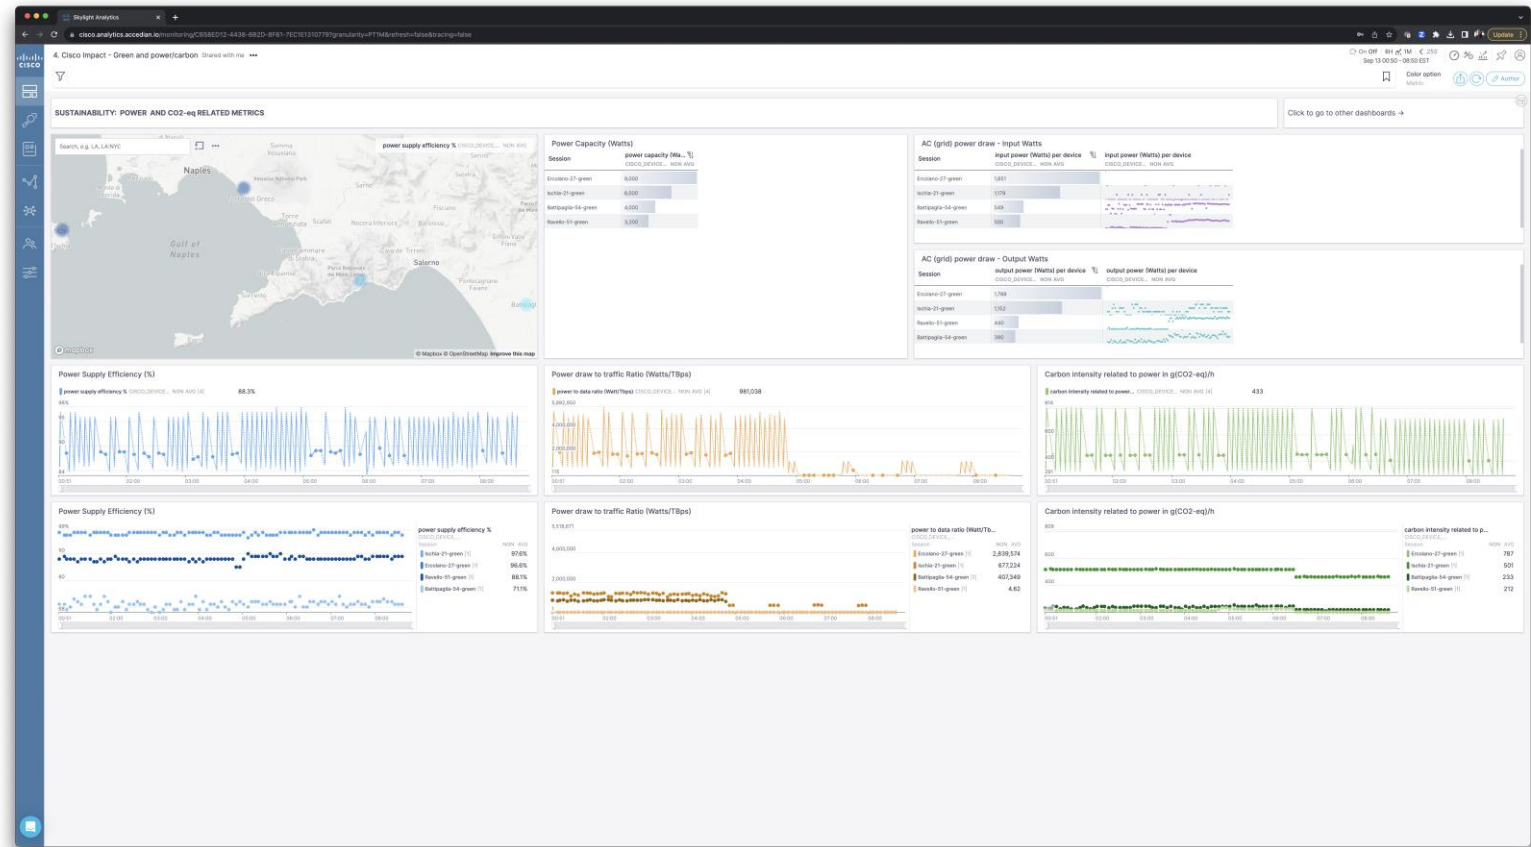

## Optimization

Performance : Power and Carbon reduction

# GreenVPN: End-to-end Service KPI Insights

- Visibility of the power/carbon footprint of services over time
- Derive greater insights from the combination with other performance assurance metrics
- Make this information available to customers in an end-customer portal
- Take well-informed optimization decisions to reduce power consumption and lower OpEx of services

# A Clear Use Case for 'GreenVPN'

Innovation

## Customer Challenges

- Achieve sustainability targets
- Demonstrate OPEX savings to stakeholders
- Single pane of glass operational view
- Energy generation diversity across the globe
- Reporting of carbon footprint per service

## Outcomes

- Demonstrate carbon footprint reduction
- Service visualization over a defined time period
- Detect abnormal power consumption and take corrective actions
- Highlight benefits with SDN automation
- Showcase energy efficiency per country
- Differentiate services based on sustainable KPIs

# Cisco is Spearheading Change Within the Industry

The bridge to possible
